MOON CAMP

EXPLORERS

2020/21

GUIDELINES

→ INTRODUCTION

Moon Camp is an education project run in collaboration between ESA and the Airbus Foundation, in partnership with Autodesk. It uses innovative learning technologies to challenge students to design their own Moon settlement with a 3D modelling tool. It features preparatory classroom activities that focus on learning-by-design and science experimentation.

Teams will develop a number of interdisciplinary scientific experiments to explore the extreme environment of space and understand how astronauts could live on the Moon. Afterwards they will 3D design their Moon Camp using Tinkercad and write a report explaining their project. Their design should be adapted to the Moon environment and make use of local resources and provide protection and/or living and working facilities for the astronauts. Participating teams will compete for the Moon Camp Explorers prize for best project.

The Moon Camp Challenge is divided into three separate categories featuring different levels of complexity: **Moon Camp Discovery (beginners), Moon Camp Explorers (intermediate) and Moon Camp Pioneers (advanced).**

→ Overview

In the future, to enable astronauts to stay on the Moon for long periods of time, new infrastructures must be developed to overcome important challenges. Such challenges include protection from radiation and meteorites, energy production, the extraction and recycling of water, food production and much more. The Moon Camp Challenge invites students to become Moon explorers and decode some of the complexities future astronauts may face.

In Moon Camp Explorers each team's mission is to design a 3D Moon Camp able to sustain at least 2 astronauts and keep them safe from the hazards and vacuum of space. Teams will also have to submit a report about their project.

The Moon Camp should include:

- Use of local resources (e.g. lunar soil, water ice)
- Technological solutions (e.g. power source, recycling system, food growth chamber)
- Protection (from meteorites and radiation)
- Living and working facilities for the astronauts.

→ Timeline

Registrations are open from 12 January 2021 to **22 April 2021 (deadline extended)**.

→ Evaluation

A jury composed of ESA, Airbus Foundation and Autodesk experts will select the winning teams based on the quality of the design and report submitted. The design should be adapted to and feasible for the lunar environment, making use of natural features. The report must explain the design choices and overall habitability and functionality of the Moon camp. The teams should include their scientific reasoning for the choices presented.

Innovation, creativity and inventiveness (25%): How well does this new design “push the envelope” and enhance user experience?

Software skills (25%): How well does the student design demonstrate technical skills and quality of design based on technical requirements?

Suitability to purpose (25%): How well does the design prove useful and suited to serving its purpose of providing a functional Moon Camp?

Online Form (25%): How well does the report explain the reasoning for design choices and overall habitability of the Moon camp?

→ Who can participate?

To participate in Moon Camp Explorers, teams should be comprised of 2 to 6 students and must be supported by a teacher or educator. The project **must** be submitted by the teacher or educator.

Participation in Moon Camp Explorers is open **worldwide*** to teams of students aged up to (and including) 14 years old.

Teams that participated in Moon Camp Discovery are also allowed to submit a project to Moon Camp Explorers.

There is no limit to the number of teams a school or club can enter, but each student can only enter one team, and each team can submit one entry only.

Moon Camp Challenge is open worldwide. In the framework of the current collaboration agreement between ESA and Airbus Foundation, if you apply from an ESA Member State, Slovenia, Canada or Latvia your team will have to fulfill the following extra conditions:

- At least 50% of team members must be citizens of an ESA Member State, Slovenia, Canada or Latvia.
- Each team member must be:
 - Enrolled in a full time primary or secondary school located in an ESA Member State, Slovenia or Canada
 - or, be home-schooled (certified by the National Ministry of Education or delegated authority in an ESA Member State, Slovenia, Canada or Latvia)
 - or, be a member of a club or after-school group, such as Science Club, Scouts or the like.

* ESA Member States in 2020: Austria, Belgium, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Luxembourg, the Netherlands, Norway, Poland, Portugal, Romania, Spain, Sweden, Switzerland and the United Kingdom.

→ How to submit the project?

1. The team's 3D model must be created exclusively using Autodesk® Tinkercad™. Submissions created in other software programs will not be accepted.
2. Projects must be submitted to the Moon Camp online platform: www.mooncampchallenge.org. The deadline is 22 April 2021 (deadline extended).
3. By submitting the project, the participants agree that their project will be shared on the Moon Camp platform. Participants accept that ESA Education, Airbus Foundation and partners have the right to use the entirety or parts of the project for outreach and education purposes.
4. Submissions must include:
 5. the team's report explaining the project and design, written in English. The report should follow the online template.
 6. at least one screen capture of the team's 3D model as a .JPG or .PNG;
 7. the public [link](#) to the Tinkercad project
5. Each team must model all individual components of the design. It is not permitted to import existing CAD data into the design, with the exception of any files provided by Autodesk, ESA, or Airbus Foundation.
6. The team must be the sole author/owner of the project and all materials submitted to the Moon Camp Challenge. Projects sponsored or funded by third parties may not be used. No third party (including your school or project sponsors) should have any rights to materials you submit.
7. ESA and Airbus Foundation, at their sole discretion, reserve the right to disqualify submissions that do not follow the guidelines, or that contain messages that are deemed inappropriate or inadequate for the audience.

Please complete your submission in English.

You have just landed on the Moon. It is a very harsh environment. But you discover that there are some natural resources that you can use on different locations on the lunar surface, such as water ice, regolith (lunar soil) and sunlight.

You now have to make some decisions about your Moon Camp.

Section 1 – Your Moon Camp

1.1. Tell us more about your Moon Camp project. Write a short paragraph description of the project.

(maximum 250 words)

Section 2 – Living on the Moon

2.1. a) Where do you want to build your Moon Camp?

(multiple choice)

- Close to the lunar poles
- Close to the lunar equator
- On the far side of the Moon
- Lunar lava tubes
- Shackleton crater
- Other _____

b) Why did you choose this location?

(maximum 100 words)

2.2. How do you plan to build your Moon Camp? Which materials would you use?

(maximum 100 words)

2.3. Explain how your Moon Camp will provide the astronauts with:

(maximum 100 words per question)

- a) Water
- b) Food
- c) Power
- d) Air
- e) Protection

Section 3 – A day on the Moon

3.1. Describe a day on the Moon for one of your Moon Camp astronauts.

(maximum 250 words)

Section 4 – Upload your files

4.1. Upload at least one rendering or screen capture of the project as a .JPG or .PNG file.

Because of data protection regulations the pictures should present only the project and not the team members.

4.2. Upload your Tinkercad 3D model project. Provide the public link to the [Tinkercad project](#)
